Q: Is it possible to call up to 5 different versions of a function? If I have a user defined function, is it possible to call up to 5 different versions of that function? I have seen in packages where you can define different versions of the same function. If so, what do you call them (version, signature or something)? I would like to call them all from the calling function in a loop, so I need to know what to pass to them. A: You can use predefined definitions (within the same package) of functions with dynamic sets of parameters.
